Date Prepared: 27/06/2021

Introduction:

The goal of this project is to make an easy and simple website for the purpose of University Club Management. This will help students connect to student organizations. This may also increase partnership between student clubs. It will make the clubs much more manageable.

Technology:

Frontend: We have planned to use **HTML**, **CSS** and **PHP** for the frontend part and **Laravel** as framework. Frontend will have following features-

(i)Header Pages

- Home
- Login/Sign up
- Search
- About us

(ii)Footer pages

- Contact us
- Terms & Conditions
- Privacy policy

(iii)Website Content Page

- Home
- My Account Control Panel for Club Members
- Events

Backend: We will be using **PHP** as well for backend language.

Database: We will be using **SQL** which will help us to create our targeted website.

Features:

User (Club members):

- Club members will be able to login/Register into the website.
- Club members will be able to create an account after their student ID, emailed, name, address, club name & University name.
- Club members will be able to edit their profile information (ex: name, address, and phone number, password).
- Club members will be able to see university events.
- Club members will be able to search for any information.
- Club members will be able to communicate with other members of his own club by texting.

Admin

- Admin panel will have login/log out system.
- Admin will be able to see all club member information.
- Admin will be able to edit and delete websites information.
- Admin will be able to handle all the club members in the website.
- Admin will be able to add & remove members.

Future work:

As this project is not ready yet to run so we would like to work on the development of remaining areas that need to be done.

We would like to develop the remaining features like: Club fund for development, Online voting committee selection, Video conference with club members.
